A Noritz tankless water heater saves

9 SQ. FT. **>** MORE SPACE THAN

A 50 gallons tank water heater.

CONVERT YOUR TANK TO TANKLESS!

Source: http://www.energystar.gov/index.cfm?c=gas_tankless_pr_savings_benefits

DIRTY WATER VS. CLEAN WATER

As years pass, traditional tank-type water heaters start to rust and build up scale inside the tank, which is where your hot water is being stored for use. A Noritz tankless heats water as it passes through the unit, so you will never have to use hot water that has been stored in an old rusty tank.

CONTINUOUS HOT WATER

A tankless water heater heats water on demand, so that means no storage or shortage of hot water.

Since there is no stored hot water that requires constant reheating like traditional tank systems, you can save up to 40% of your current water heating bill.* The ability to use less-expensive PVC venting, flexible installation options and superior construction quality makes Noritz the industry leader for value & durability.

*This information is provided as a reference based on average hot water usage and unaltered energy source. Actual results may vary. The cost savings factor reflects solely to the relative usage of water heater. Actual gas utility bill may reflect the usage of other gas appliances (e.g. gas stoves, furnace, clothes dryer).

By heating water only when you need it, ENERGY STAR qualified tankless water heaters save the typical family more than \$100 per year on gas bills compared to a standard storage model. Larger families can save even more!

FEDERAL TAX CREDIT/UTILITY REBATES

Noritz water heaters that meet ENERGY STAR qualifications are eligible for a federal tax credit of \$300. In addition to the federal tax credit, many local utility companies are recognizing the benefits of tankless water heaters and are encouraging this through rebates. Check with your installer, local utility company or www.noritz.com/rebates.
